Detail-oriented recent graduate skilled in front-end and back-end web development, specializing in building responsive applications and integrating RESTful APIs, seeking to deliver innovative solutions as a Full-Stack Web Developer

Education

STI College Balagtas

Bachelor of Science in Information Technology

Thesis: Barangay Management Information System for Efficient and Effective Governance on Barangay Primero Borol 1st

Awards: President's Dean Lister (2021-2023)

Balagtas, Bulacan
June 27,2025

Experience

Organization: Odecci Solutions Inc.

Guiguinto, Bulacan

Position Title: Front-End Developer & Integration Engineer (Internship)

January 2025 – May 2025

- Full Front-End Ownership CRM** – Spearheaded the front-end development of a modular, responsive CRM using the TALL stack; delivered dashboards, contact and deal management, dynamic forms with custom fields, RBAC and secure authentication, and collaborated on CI/CD, GitHub workflows, and API integration for leads and sales pipeline
- Employee Management System – Phase 1 (Front-End)** – Implemented the first development phase of an Employee Management System, building the employee profile dashboard, task list, schedules, and notes interface using modern front-end best practices.
- Interactive HTML Marketing Email** – Designed and coded a responsive, branded email template in HTML/CSS to promote Odecci's school website services, ensuring compatibility across major email clients and allowing staff to easily copy and paste the template directly into Gmail for campaigns.
- Quotation Template** – Created a reusable quotation template in HTML and SCSS used to generate professional client quotes with itemized services, rates, and totals aligned to Odecci's branding

Skills & Interests

Technical

- Front-End:** HTML5, CSS3, JavaScript (ES6+), Typescript, React, Redux, Tailwind CSS, Bootstrap, Livewire, Sass/SCSS
- Back-End:** PHP (Laravel), PostgreSQL, MySQL, MSSQL, MongoDB, Node.js
- API & Integration:** RESTful APIs, Google Gemini Vision AI, Twilio SMS, OAuth 2.0 PKCE
- Cloud & DevOps:** Google Cloud Platform (GCP), Serverless Architecture (Supabase/Edge Functions), Docker, Git, CI/CD

Design & Development Practices

- UI/UX:** Figma, Adobe Photoshop, Adobe Illustrator, Responsive Design, Cross-Platform Optimization
- Architecture:** Modular Components, Full-Stack Development, Realtime Systems (Supabase), Hybrid Data (Dexie.js + Cloud)
- Testing & Quality:** Unit Testing, Functional Testing, Lighthouse Performance (100/100)

Highlighted Projects

TyphoGuard: Disaster Response Platform | Full-Stack Developer Stack: Laravel 11, Alpine.js, Tailwind CSS, RESTful APIs

- Mission-Critical Architecture:** Engineered a responsive environmental intelligence platform using **Laravel 11** and **Tailwind CSS**, delivering real-time monitoring for weather, tides, and dam water levels across the Philippines.
- Multi-Source Data Aggregation:** Architected a robust API layer integrating **PAG-ASA**, **Tomorrow.io**, and **WeatherAPI** to provide sub-millisecond location-based forecasts, live radar imaging, and 7-day predictive models.
- Advanced Geolocation & Logic:** Implemented dynamic location services using **Nominatim** and **Alpine.js** with smart search fallbacks, featuring automated alert thresholds (Safe/Warning/Critical) for dam monitoring to enhance public safety.

Barangay Management Information System for Efficient and Effective Governance on Barangay Primero Borol 1st | Full-Stack Developer Stack: PHP (CodeIgniter), MySQL, Twilio SMS, JavaScript, Leaflet Maps

- GovTech Architecture & Data Security:** Developed a comprehensive local government platform featuring **Role-Based Access Control (RBAC)** for secure administration and a centralized resident database, enabling real-time demographic visualization and jurisdictional tracking.
- Service Automation & Communication:** Engineered automated workflows for permit issuance and service transaction tracking to streamline operations, integrating an **SMS communication platform** for instant constituent notifications and status updates.
- Crisis Management & Compliance:** Implemented **interactive mapping tools** for disaster response coordination and complaint monitoring, supported by a robust **audit logging system** to ensure strict data accountability and governance transparency.

Striven: AI Fitness Platform | Full-Stack Developer Stack: React, Vite, Tailwind, Supabase Edge Functions, Google Gemini AI, Capacitor

- 1. **Cross-Platform Mobile Architecture:** Engineered a responsive PWA and native Android app (via **Capacitor**) featuring real-time pedometer tracking (**DeviceMotion API**) and **cross-platform leaderboards** that sync steps, food logs, and workouts between mobile and desktop using the custom **Striven Score** algorithm.
- 2. **Serverless AI & Cloud Infrastructure:** Architected a scalable **Serverless Cloud environment** using **Supabase Edge Functions** to process dietary imagery via **Google Gemini Vision AI**; implemented robust fallback logic (**Hugging Face/OpenFoodFacts**) for precise macro-nutrient estimation.
- 3. **Offline-First Data & Workout System:** Built a comprehensive workout organizer powered by **FastAPI** integration and a resilient **dual-sync architecture** (**Dexie.js + Supabase**) to ensure offline availability, seamless cloud synchronization, and strict **Row Level Security (RLS)** for user data.

Simply Stated | Full-Stack Developer Stack: React 19, Vite 7, TypeScript 5.9, Redux Toolkit, Supabase, Tailwind CSS 4

- 1. **Modern Frontend Architecture:** Developed a production-ready blog platform using **React 19** and **Vite 7**, utilizing the latest concurrent rendering features and **TypeScript 5.9** for strict type safety.
- 2. **Secure Serverless Backend:** Architected a robust backend using **Supabase**, implementing **Row Level Security (RLS)** policies to strictly enforce user permissions alongside secure JWT-based authentication.
- 3. **Advanced State Management:** Engineered a centralized store using **Redux Toolkit** to manage complex asynchronous state, including user sessions, content caching, and real-time UI updates.

Certifications & Awards

Professional Certifications & Training

Organization: Cisco Networking Academy	Remote
Title of Qualification Awarded: Data Analytics Essentials	2025
Organization: Microsoft and LinkedIn	Remote
Title of Qualification Awarded: Career Essentials in Software Development	2025
Organization: MongoDB University	School
Title of Qualification Awarded: MongoDB Node.JS Developer Path	2025
Organization: Asean Foundation with Collaboration of AI Ready ASEAN and Google.org	Remote
Title of Qualification Awarded: Certificate of Completion – AI Learning Modules	2025
Organization: APAC Cybersecurity Fund – The Asia Foundation	Remote
Title of Qualification Awarded: Certificate of Completion – Cyber Hygiene Training	2025
Organization: STI COLLEGE BALAGTAS	School
Title of Qualification Awarded: Certificate of Completion – SAP BUSINESS ONE, SAP ADVANCE	2024
Organization: Linux Professional Institute	School
Title of Qualification Awarded: Certificate of Completion – Systems Administration (Linux)	2024

Competitions & Hackathons

Organization: STI COLLEGE BALAGTAS	School
Title of Qualification Awarded: Mobile App Hackathon (1st Runner Up – UI/UX)	2024
Organization: iSite Inc.	Remote
Title of Qualification Awarded: National IT Skills Competition Participation – Python	2024
Organization: STI COLLEGE BALAGTAS	School
Title of Qualification Awarded: Codefest (1st Runner Up)	2024
